Summary

Full-stack and AI engineer, 2+ years at a regulated insurer shipping production generative AI: multi-agent LLM workflows on Amazon Bedrock, evaluated pre-launch and gated by human-in-the-loop governance. Also ships open source.

Professional Experience

Associate Analyst Development Aug. 2025 – Present
Sun Life Global Solutions *Bengaluru, India*

Absence Claim Automation — Agentic AI Platform

- Built and shipped a production multi-agent LLM workflow (Extraction, Validation, Decision) that processes 30+ FMLA leave claims a day, cutting review turnaround from 15 days to 3–4 days on routine claims
- Designed the agent orchestration layer in LangChain on Amazon Bedrock, using function calling, structured outputs and prompt engineering over FastAPI and PostgreSQL services
- Evaluated the agents against historical claims before go-live; human-in-the-loop governance checkpoints (review, approval, audit) route each recommendation to approvers handling sensitive claimant PII
- Mentored 4 Graduate Engineer Trainees on agentic architecture and code review

Document Converter Platform

- Orchestrated a cloud-native document pipeline on AWS Step Functions, Lambda, S3, IAM and API Gateway with CloudWatch monitoring and Jenkins CI/CD; added an AI extraction layer reaching 85% accuracy on edge cases
- Built a reusable TypeScript/React component library and integrated PrinceXML for templated PDF generation

Graduate Engineer Trainee Aug. 2024 – Aug. 2025
Sun Life Global Solutions *Bengaluru, India*

GitHub Copilot Productivity Metrics Platform

- Built this AI-assisted developer productivity platform solo in six weeks (Flask, React, SQL); NumPy/Pandas data pipelines quantified 324 engineer-hours and $48K in savings, and it became the standard tool for 30+ squads (Employee of the Quarter, Q2 2025)

Projects & Open-Source Contributions

Numera | *Python, FastAPI, MCP, SQLAlchemy, Pytest* numera-ri3y.onrender.com/docs · GitHub

- Built auditable fintech transaction infrastructure for an agent-first FX/hedging API (side project): append-only audit trail, double-entry ledger reconciled against the execution venue, idempotent order execution
- One hexagonal core served over a REST API (FastAPI) and a Model Context Protocol (MCP) server, with exact decimal money math and a contract-tested execution-venue port; 60+ tests gating CI, containerised with Docker and deployed

Gitpay | *TypeScript, REST APIs, automated testing* PR #1583, merged

- Fixed a broken access-control bug in this 215-star payment platform: task deletion wiped related records before the ownership check ran, returning HTTP 200 to a non-owner; disclosed privately to the maintainer and fixed with API regression tests

Ditto | *TypeScript, React, Vitest* PR #75, merged

- Added a client-side Markdown export to this JS/TS clone-detection tool, covered by a Vitest suite in GitHub Actions CI

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL (PostgreSQL), HTML/CSS
AI and Agents: Generative AI, LLMs, Amazon Bedrock, LangChain, function calling, structured outputs, LLM evaluation
Machine Learning: neural networks (CNN, LSTM), classification, clustering, regression, intrusion detection, NumPy, Pandas
Backend and Frontend: FastAPI, Flask, REST APIs, SQLAlchemy, Pydantic, Pytest, React, Material-UI, Tailwind CSS
Cloud: AWS (Lambda, Step Functions, S3, IAM, CloudWatch), Docker, observability, CI/CD, Jenkins, GitHub Actions
Practices: System design, production debugging, PII and data security, clean architecture, contract testing, code review

Education, Certifications & Research

Education: B.Tech, Computer Science and Engineering, SRM Institute of Science and Technology (2024); CGPA 9.08/10
Certifications: Machine Learning (Stanford/Coursera); AWS Cloud Operations; Google Cloud Platform
Research: Botnet Attack Detection Using Deep Learning in IoT Networks — first author, 15th ICCCNT 2024 (IEEE)
