SUMMARY

Backend-leaning full-stack engineer with 2+ years building production agentic AI systems, cloud-native services, and well-tested Python APIs. Ships end-to-end, architecture to deployment, with a bias toward correctness and measurable impact.

PROFESSIONAL EXPERIENCE

Associate Analyst Development

Sun Life Global Solutions

Aug. 2025 – Present

Bengaluru, India

Absence Claim Automation — Agentic AI Platform

- Built and shipped a production multi-agent LLM workflow (Extraction, Validation, Decision) automating FMLA leave validation, cutting review turnaround from 15 days to 3–4 days on routine claims
- Designed the agent orchestration layer in LangChain over FastAPI and PostgreSQL services, with React review dashboards surfacing each agent’s decision and rationale to human approvers
- Mentored 4 Graduate Engineer Trainees on agentic system architecture and code review

Document Converter Platform

- Orchestrated a cloud-native document pipeline on AWS Step Functions and Lambda (S3, IAM, API Gateway, CloudWatch) with Jenkins CI/CD, adding an AI extraction layer reaching 85% accuracy on conversion edge cases
- Built the reusable component library (TypeScript, React, MUI, Storybook) and integrated PrinceXML for templated PDF generation from JSON/XML

Graduate Engineer Trainee

Sun Life Global Solutions

Aug. 2024 – Aug. 2025

Bengaluru, India

GitHub Copilot Productivity Metrics Platform

- Designed and built a full-stack analytics platform (Flask, React, SQL) measuring AI-assisted developer productivity — a solo build, six weeks end to end
- Quantified 324 engineer-hours and \$48K in cost savings via NumPy/Pandas pipelines over per-squad telemetry, informing org-wide tooling decisions
- Adopted by 30+ engineering squads as the standard productivity measurement tool; awarded Employee of the Quarter (Q2 2025)

PROJECTS

Numerica | *Python, FastAPI, MCP, SQLAlchemy, Pytest*

github.com/Aumshah45/Numerica

- Architected an agent-first FX/hedging API on a hexagonal core, exposing one shared domain over both a REST API (FastAPI) and a Model Context Protocol (MCP) server
- Implemented spot conversion and covered-interest-parity forward pricing with exact decimal money math, itemized cost attribution, and server-side risk policy enforcement
- Added an append-only audit trail, double-entry ledger, and contract-tested venue seam; 60+ tests with mypy and ruff gating CI

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL (PostgreSQL), C++, HTML/CSS

AI and Agents: LangChain, Model Context Protocol (MCP), multi-agent orchestration, LLM document extraction, NumPy, Pandas

Backend: FastAPI, Flask, SQLAlchemy, Pydantic, REST API design, Pytest

Frontend: React, TypeScript, Material-UI, Storybook, Tailwind CSS, Vite

Cloud and DevOps: AWS (Lambda, Step Functions, S3, IAM, API Gateway, CloudWatch), Jenkins, CI/CD, Vercel

Practices: Hexagonal/Clean Architecture, contract testing, mypy/ruff, Git, Agile/Scrum

EDUCATION

SRM Institute of Science and Technology

B.Tech, Computer Science and Engineering; CGPA: 9.08/10

Chennai, India

Sep. 2020 – May 2024

CERTIFICATIONS & RESEARCH

Certifications: Machine Learning (Stanford/Coursera); AWS Cloud Operations; Google Cloud Platform

Research: Botnet Attack Detection Using Deep Learning in IoT Networks — first author, 15th ICCCNT 2024 (IEEE)
